

Teflon Lined Centrifugal Pump

Teflon Lined Centrifugal pumps combine the mechanical benefits of metallic casings with the chemical resistance of thermoplastics. These pumps all feature no wetted metal components and are ideal for high purity applications, where contact with metallic components must be avoided.

This pump is suitable for transporting acid, alkali and salt solution, strong oxidant, organic solvents, corrosive slurries, solvents, hydrocarbons and other strong corrosive medium. If the medium is hydrofluoric acid or hydrobromic acid,

Application

Chlorine Water Treatment | Textile Process | Electroplating Industry |
Waste Water | Chemical Industry | Paper Industry | Sea Water Application

Operation Data

Flow (max)	: 400 m ³ /hr
Head (max)	: 90m
Working Temp (max)	: 120°C
